

# Designed for Complete Integration

FARO's complementary products — **FARO Sphere** and **FARO Stream** (which serves as the data bridge between Focus Premium and Sphere) — create a powerful union of three distinct technologies, enabling users to capture with confidence and connect their world anytime, anywhere. This reduces time to decision while streamlining workflow tasks, meeting the demands of today's increasingly remote, digital workforce.

## Stream

Stream is the first mobile app that connects FARO hardware with FARO Sphere cloud-based applications and services. By uniting hardware with cloud software, Stream makes on-site capture workflows more efficient and brings captured data directly into the FARO ecosystem. It does so by providing live feedback of the captured scans while performing its pre-registration function.

Stream provides the best on-site efficiency for data capture with the Focus Premium scanner for scan operations in architecture, engineering, construction and facility management. Now, users can be confident in the successful and complete scan data they collect in real-time, confident that no additional site visits will be required because of missing data and confident in radically expedited project finalization times as Stream and Sphere are already doing some of the work automatically while a Focus Premium operator is returning from the field. Premium also allows the ability to include complementary data like field annotations and photographic images to the project after a scan is complete.

**Stream integrates the captured data seamlessly into Sphere, and provides full FARO solution and application compatibility.**
